Corrections

These corrections apply to the March 2009 version of the NDEQ Petroleum Remediation Section’s *Risk-Based Corrective Action (RBCA) at Petroleum Release Sites: Tier 1 / Tier 2 Assessments & Reports* guidance document. All listed changes have been incorporated into the version dated May 2009, which is available on the NDEQ website (www.deq.state.ne.us).

**Table 2-1.** *(page 4)*

The second entry should read:

| Vapors below 1% of the LEL in a building, utility conduit, or other structure | Next business day | During business hours, contact ANY DEQ Petroleum Remediation Section project manager at **402-471-2186**. |

**4.4.3 – Water Well Survey** *(page 18)*

Paragraph 2 should read:

Unregistered wells may be present. The local Water or Utility Superintendent must be contacted and asked about the presence and locations of unregistered domestic or other wells. The full name of the person contacted and the conversation date must be documented in the report. A visual survey of properties within 200 feet of the source (Tier 1) or within 200 feet of the maximum extent of soil contamination, free product, or dissolved contamination in ground water (Tier 2) must also be conducted to verify the presence or absence of unregistered wells. Contact the property owner(s) if necessary. The unregistered well survey should be made in conjunction with the subsurface structures survey (Section 4.4.4).

**6.1.4.2 Soil Gas Sampling Option** *(page 45)*

Item 1 should read:

1. Monitoring points must be installed above the estimated capillary zone, in the following locations:

   - The source area(s), within the soil contaminant mass;
   - Adjacent to all on-site and the nearest off-site habitable structures, at a depth slightly less than the bottom of the building’s footings, or three feet BGL, whichever is greater; and,
   - At least one location between the source area(s) and each structure, within the soil contaminant mass.
