10-026-C

• Perform housekeeping to minimize dust in areas where materials containing chromium

(Cr) and manganese (Mn) are stored, used, or handled;

- Use either industrial vacuum system or manual sweeping to reduce the amount of dust;
- Remove dust from walls, ledges, and equipment using low pressure air or other means, then sweep the area at least once per month;
- Keep doors shut except during normal ingress and egress;
- Maintain and operate all process equipment in accordance with manufacturers' specifications and in a manner to minimize dust creation;
- Store all raw materials containing Cr or Mn in closed containers;
- Only add materials containing Cr or Mn to the mixer in a manner that reduces emissions and cover the mixer at all times when mixing is occurring (except when materials are being added); and
- If prepared feed products containing Cr or Mn are loaded into trucks or railcars a device must be used at the loadout end of each bulk loader to lessen fugitive emissions by reducing the distance between the loading arm and the truck or railcar (if applicable).

□ Existing sources: If the facility is an existing source and has an initial average daily feed production greater than 50 tons per day, it is required to capture emissions from the pelleting operation and route them to a cyclone. Is documentation maintained which demonstrates the proper operation of the cyclone determined in accordance with § 63.11621(f)?
□Yes □ No
If yes, please provide a description of the documentation maintained. The documentation must either be the cyclone manufacturer's operating specifications or standard operating procedures developed by the prepared feeds manufacturer to verify the proper operation.
Facilities with an initial daily feed production of less than or equal to 50 tons per day:
If this facility has an initial average daily feed production of 50 tons per day or less and is not required to install and operate a cyclone to control emissions from pelleting operations, please provide documentation of how the initial average daily feed production level was determined.
Print or type the name and title of the Responsible Official for the facility:
Name: Title:
 A Responsible Official can be: The president, vice president, secretary, or treasurer of the company that owns the plant; An owner of the plant; A plant engineer or supervisor of the plant; A government official, if the plant is owned by the Federal, State, City, or County government; or A ranking military officer, if the plant is located at a military base.
I CERTIFY THAT: The facility is operating in compliance with the relevant standards and other requirements for prepared feeds manufacturing facilities according to §63.11619 – 63.11627 of NESHAP Subpart DDDDDDD, and the information contained in this report is accurate and true to my knowledge.
